

VISICON

Migration base for S/4HANA

Get started professionally
in S/4 HANA.

The VISICON approach

For S/4 HANA migration from SAP ERP
or for new implementations of S/4HANA

You have decided on a future with S/4HANA and are thus treading a future-oriented path. With the VISICON approach, you use the advantages of S/4HANA to redesign your processes and raise your everyday business to a new standard through versatile features.

We rely on a mixture of the brownfield approach, which consists of a conversion of the existing and complete SAP ECC system into an S/4HANA system, and the greenfield approach, which involves a new implementation of an S/4 HANA system from scratch.

With our VISICON S/4HANA Basis, we offer you a basic framework that is not only very close to the SAP standard, but has also been holistically thought through for the trade and industry sectors. Building on this, we customise it according to your individual needs.

Instead of blocking your capacities with the intensive familiarisation with S/4HANA, you can let us accompany you through the complete implementation and migration.

ADVANTAGES:

Time & cost saving

Familiarisation with S/4HANA is very time-consuming. With the VISICON migration basis, the project is not only quickly testable, but also the rapid transition to the process determination phase incl. FIT/GAP process analysis is made possible.

Implemented with know-how

Our experienced consultants and developers ensure that you not only stay as close as possible to the SAP standard, but also take into account the individual needs of your company.

Special features

- FI/CO solution approach
- FIORI APP pre-selection
- pre-maintained mapping tables, which enable you to connect any ERP systems across the group flexibly and in a time-saving manner.

SMART PROCESSES

Together we can manage the changeover

The change to S4/HANA is not a project that can be completed in a week. We accompany you for months on the way to your new SAP world. With our industry-specific S4/HANA basis, we offer you an easy and professional start.

Analysis

At the beginning there is understanding. You tell us what is particularly important to you, what your goals are and in which areas your focal points are. As part of the stocktaking, we get a rough picture, on the basis of which we can start planning.

Planning

During the planning phase, we work out the concept and give you the best possible preview of what is to come. Which phases you will have to deal with, when and with how much effort, and how far we will go with the individualisation.

Basis

Once the path and the goal have been defined, we start with the master data migration, create the process landscape and work out your new environment step by step.

Individualisation

In the course of workshops and training sessions, we will continuously come across details that will bring your new working environment to life. We make sure that the customising supports your processes in the long term and that no avoidable workarounds arise.

Go Live

With your Go, you start working with S/4HANA. We will continue to be there for you and are at your disposal with advice and support for further adjustments.
